Electronic devices

Some electronic devices can affect the operation of the aircraft, and must only be used in accordance with the following restrictions. 'Flight Mode' refers to a Personal Electronic Device (PED) function which disables the transmitting capability of your device. You must select Flight Mode on your device prior to departure. Flight Mode must not be switched off until after arrival. If you are unable to demonstrate to Cabin Crew that the transmitting capability of your device is switched off, the device must be turned off for the entire flight.

Hand-held PEDs

Devices that weigh 1kg or less may be used in Flight Mode at any time. Examples include mobile phones, tablets, electronic games and e-readers. These may be stowed in a seat pocket or held in your hands during taxi, take-off and landing.

Larger PEDs

Devices heavier than 1kg may be used in Flight Mode after the seatbelt sign has been extinguished, until commencement of descent. These include laptop computers, which must be stowed in an overhead locker or in a bag under the seat in front, during taxi, take-off and landing.

Bluetooth

The use of Bluetooth headphones is permitted at all times. Other devices that connect via Bluetooth may only be used after the seatbelt sign has been extinguished, until commencement of descent.

Devices permitted for use

Non-transmitting devices may be used at any time. These include medical devices that are required for the support of human life, GPS receivers, video and still cameras and other devices powered by micro-cell batteries and solar cells.

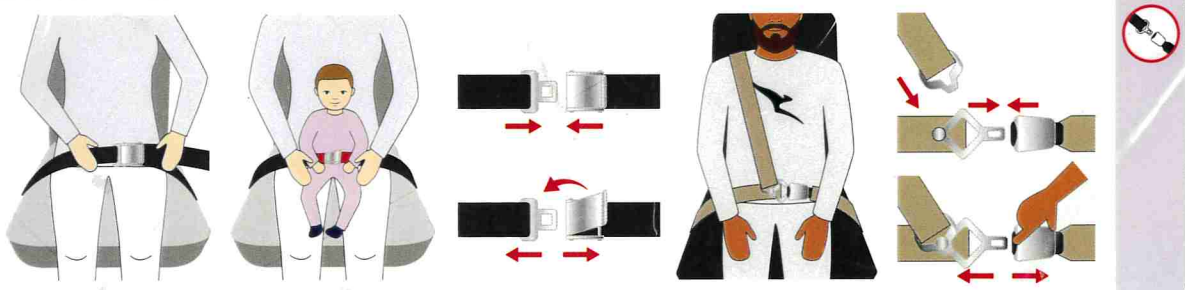
ELECTRONIC DEVICES

Transmitting devices without 'Flight Mode' not permitted at any time.

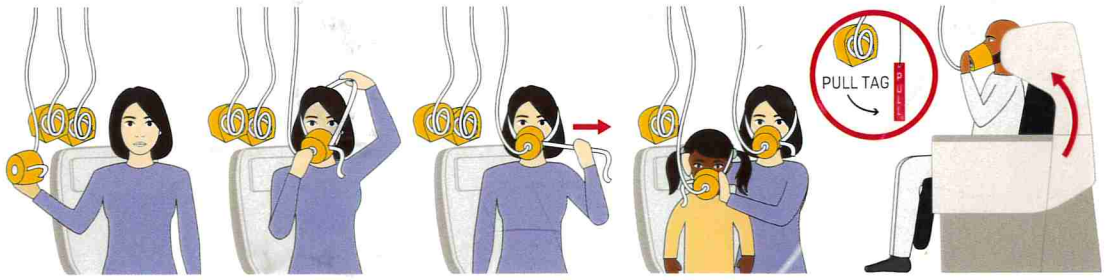
Must be in 'Flight Mode' during take-off, inflight and landing.

Not permitted at any time

SEAT BELTS



OXYGEN



BRACE POSITIONS

If you are holding an infant provide uniform support to the infant's head, neck, and body.

Obey the authority of the Crew

All passengers must comply with directions given by any member of the Crew. **It is an offence to: interfere with Crew members as they perform their duties; tamper with the aircraft or equipment; or behave in a way that poses a nuisance or threat to the safety of the aircraft or to any persons onboard.** The Captain is responsible for the safety of all persons onboard the aircraft.
